

THE PLYMPTON WINNETUXET MVP PROJECT PUBLIC PRESENTATION SERIES January 28, 2021, 6:30 PM

Workshop 1 – A look at the Role of Green Infrastructure in a Resilient Plympton

Project Overview: Plympton, MA is partnering with Southeastern Regional Planning and Economic Development District (SRPEDD), Manomet, Inc., Mass Audubon, and The Nature Conservancy to identify nature-based approaches to climate change resiliency. A series of public workshops will be held to spark local discussion of opportunities and implementation strategies.

Manomet, Inc., will lead a workshop on January 28 to explore the role of green infrastructure in Plympton's resiliency and quality of life. The workshop will include a discussion of Plympton's regional context, local conservation priorities, and forest health and management. Participants will have an opportunity to learn about analytic work completed to date and contribute to establishing priorities for the effort.

Green infrastructure as defined for the project includes a network of forests, wetlands, waterways, wildlife habitats, agriculturally significant soils, and other natural areas that support native species, maintain natural ecological processes, and sustain air and water quality.

This project is made possible by a grant from the Taunton River Stewardship Council (Wild & Scenic Taunton River), and a Massachusetts Executive Office of Energy and Environmental Affairs, Municipal Vulnerability Preparedness Program (MVP) Action Grant.
